Germs are pervasive in our environment and are easily spread through contact with others, surfaces and inhalation/ingestion.

**COMMON GERMS**
- Norovirus
- Influenza
- Hepatitis
- Coronavirus
- Salmonella
- E-coli

**TRANSMISSION**
- Person to person via droplets through the air
- Bodily fluids (sweat, saliva, blood)
- Touching contaminated surfaces

**STATISTICS**
- 1 in 5 adults have the flu annually
- Norovirus causes 70,000 hospitalizations each year
- $6.2B in lost work days due to employee illness

The Spaulding Classification System characterizes the difficulty to kill germs with disinfecting agents.

It is generally accepted that:
- Enveloped viruses are easier to kill. *These include: Influenza, Coronavirus and Hepatitis.*
- Non-Enveloped viruses substantially more difficult to kill. *These include: Norovirus, Rotavirus.*

**RESIDUAL SOIL**
- Can shelter germs

**FACTS**
- Most disinfectants do not effectively remove soil, if at all.
- Cleaning well removes soil where germs are found and can multiply.
- Cleaning well allows disinfectants to work more effectively.

You must clean AND disinfect!
INFECTION PREVENTION AND CONTROL

2 INFECTION PREVENTION

EDUCATE
Train employees and reinforce the importance of staying home when sick.

ENCOURAGE GOOD HABITS
Handwashing: Frequently for at least 20 seconds – put posters up for reminders.
Hand sanitizing: Provide hand sanitizing stations to enable ease of use.
Cover mouth & nose: When coughing or sneezing.
Avoid close contact: Encourage social distancing behaviors.

BREAK THE CONTAMINATION CYCLE
Do not allow germs to travel!
Clean + disinfect: Avoid cross contamination of tools like mop heads.
Prioritize high touch surfaces.
Use an EPA registered disinfectant: Follow label instructions.

INFECTION CONTROL

PREPARE
Being ready for everyday infection control can help when an outbreak occurs.

• Have a written & posted plan for infection control.
• Ensure a stock of cleaning products, tools & supplies.
• Train employees on PPE and keep it available.

ESTABLISH
Consistent and frequent cleaning policies & procedures are critical.

• Proper cleaning and disinfecting procedures should be part of every employee’s training plan.
• Managers are the role models – exhibit the behavior you want to see.
• Post your policies and make them easily accessible.

ENFORCE
Enforcing the “good behavior” of cleaning and disinfection can help ensure it’s done right.

• Catch your employees cleaning and reward the actions.
• Have frequent spot checks.
• Train by doing – when you notice an improper procedure – correct it by showing the right way.

Products for Infection Prevention and Control

Combines quaternary actives with powerful cleaning agents, buffered to a neutral pH for no-rinse cleaning and hospital use disinfecting. Meets OSHA Blood Borne Pathogen (BBP) requirements.

- Kills a broad spectrum of bacteria, viruses, and fungi.
- Helps control cross-contamination and reduce the spread of infection.
- Cleans, disinfects and deodorizes in one-labor saving step.
- Recommended for use as an all-purpose cleaner, disinfectant and deodorizer as part of regular maintenance programs.
